One choice to protect your business premises and assets

We've made the Hills Reliance the simplest security system to operate

Function Keys:

On:

Fully activate your security system to monitor all sensors.

Partial:

Activate the security system to monitor selected sensor to protect the perimeter while allowing movement within the premises.

Exit:

Extends your exit time, when you need to re-enter the premises but do not want to turn the system off and back on. The exit time is selectable at installation.

Bypass:

Temporarily turns off detection devices. Individual detectors can be turned off for flexibility.

Chime:

This button turns the "Chime" feature on and off. When it is on, a pleasant ding-dong sound will let you know that an outer door (or window) has been opened, for example to announce the arrival of a visitor or family member.

EMERGENCY KEYS:

These can be programmed to contact fire, ambulance, or police personnel via a 24 hour control room if an emergency occurs. Just press and hold the button for 2 seconds.

Advanced Wireless Technology Option

....because sometimes it's impossible to run wires for the sensors needed to provide complete security.

That's why for these installations, Hills Reliance offers a wireless receiver and a selection of wireless security sensors. Designed to compliment the Hills Reliance security system, this full line of wireless equipment allows you to tailor a security system to your exact needs.

Motion Sensors:

These wireless infrared motion detectors, without the need for wires, can be placed anywhere they are needed for additional security.

Door/Window Sensors:

Just add a sensor to any door or window in those hard-to-reach places that need protection.

They can be placed on safes, gates, or any restricted areas.

Shock Sensors:

For large glassed areas eg. shop front, a shock sensor can be used to detect vibrations, notifying the security system if someone has forced or broken the window.

And whether your premises is leased or owned you can take your investment with you if you move.

The Key to Convenience

If you want control that is always right at your fingertips, the optional 2 or 4 button keychain remote is for you. Both keychain remotes serve to arm and disarm your system. The panic buttons can activate a siren to help scare the attacker away, or produce a silent report to the monitoring station in a duress situation.

Motion Sensors

Keychain Remotes

Door/Window Sensors

We understand that you have worked hard to build your business, and that protecting it is the highest priority. The new Hills Reliance Security System is specially designed to meet the ever-increasing demands on security systems - it's the smartest move you can make to safeguard your business. With advanced and reliable technology, and using strategically placed sensors, the Hills Reliance has you covered in protective security.

Advanced Technology offers the best protection to your business

In order to accommodate you and your premises, the new Hills Reliance Security System has grown in capability and capacity to meet your increased needs and excellence you demand in security. It offers a higher zone count of 128 and access control features.

Using a simple to program and operating method, supporting up to 8, 12 or 128 sensors, the Hills Reliance allows you to protect small-medium commercial properties, retail business, warehouses and residential properties with one single powerful platform that is easy to manage remotely.

It's easy to see why the Hills Reliance is the best investments you can make for your business. It provides flexibility, performance you can rely on, and the security your business deserves.

Feature benefits for your business:

Commercial

- Expandable capability to 128 zones for more flexibility – one platform for more sites
- Built-in Auto Arming and Disarming for convenience of after-hours security
- Smart Auto Arming feature that checks to see if anyone is still on the premises before attempting to re-arm

Retail

- Added access control features including REX, DOTL and Forced Door for improved security
- Auto Partial Arm by Area allows the premises to automatically secure the perimeter of any area by a preset time while still allowing free movement
- Keyless door entry option available to manage staff access

Warehouse

- Late to Close reporting by area provides greater security
- Disable Bypass For Force Arm Zones can provide greater security to prevent force arm zones from being automatically bypassed
- Available in 8, 12 and 128 zone capacity
